

Dear PIMRC Participants,

Welcome to the 25th anniversary of PIMRC – IEEE International Symposium on Personal, Indoor and Mobile Radio Communications.

The first time, I attended PIMRC was in 2005 in Berlin, Germany. For many reasons, I will never forget the overall experience and memories that I have from that city and conference. Here we are, 10 years later, and I have the pleasure of hosting you in the wonderful city of Washington D.C. I hope that you also have a unique experience both from the city as well as the technical program.

It takes a lot of effort and sacrifice from many individuals to prepare a program at this scale. Therefore, I would like to express my sincere gratitude to all members of the technical committee who have been working tirelessly to make this year's program a very special event. First and foremost, thanks to the loyal authors who have submitted their research work to this Symposium. Many thanks to the tutorial, workshop and panel Chairs who have contributed to the technical program by organizing wonderful events along with the main technical sessions of the conference.

My special appreciation to the Track Chairs who dedicated so much time and effort to manage hundreds of submissions and their corresponding reviews in order to ensure a successful and high quality technical program. I would also like to express my gratitude to the TPC members of each track who shared their technical expertise and assisted us in reviewing all submitted papers. The invited keynote speakers, panelists and session Chairs have undoubtedly added value to our strong program and I am grateful for their involvement, participation and contributions.

Finally, to all other members of the organizing committee including the student volunteers who will one day present their research results in a future edition of PIMRC, thank you for your dedication and help in ensuring a successful conference.

25 years has passed since the start of the PIMRC journey; and since then, we all have witnessed amazing technological breakthroughs. Your research has contributed to these breakthroughs throughout these years and no doubt you will shape up the wireless technology horizon in the next 25 years. I just wonder what the Technical Program Chairs of PIMRC-2039 will see in their world! Whatever the future technological achievements are, it is my hope that they are only used to improve and enhance human lives across our globe.

Welcome to Washington D.C. and let's celebrate the 25th anniversary of this amazing conference together. Thank you for being a PIMRC fan!

Kamran Sayrafian, Ph.D.
